

Jada Sasikumar

Entry Level Graduate | DevOps Engineer | GitHub: Jada Sasikumar

Mobile: +91 8639763682 Email: sasikumarjada2004@gmail.com LinkedIn: linkedin.com/in/Jada Sasikumar Location: Hyderabad

Career Objective

Bachelor of Technology in Artificial Intelligence & Machine Learning with expertise in Python, Bash, AWS, Docker, Kubernetes, Jenkins, Terraform, and CI/CD. Seeking a DevOps Engineer role to design, deploy, and maintain scalable cloud infrastructure and automated pipelines, enhancing operational efficiency, system reliability, and continuous delivery for organizational technology solutions.

Education

Bachelor of Technology in Artificial Intelligence & Machine Learning NRI Institute of Technology, Agiripally	August 2021 – June 2025 CGPA: 8.2
Board of Intermediate Education Sri Viveka Junior College, Kandukuru	June 2019 – April 2021 CGPA: 8.5

Technical Skills

- Programming & Scripting Languages:** Python, Bash, Object-Oriented Programming
- Libraries:** Pandas, Numpy
- Database Management:** MySQL
- Cloud Platforms & Services:** AWS, EC2, S3
- DevOps Tools:** Docker, Kubernetes, Jenkins, Terraform, CI/CD
- Version Control & IDEs:** Git, GitHub, Maven, VS Code, IntelliJ IDEA
- Software Architecture & Design Patterns:** Microservices, MVC
- Web & API Development:** REST APIs
- Data Structures & Algorithms

Projects

Student Record Management System	July 20XX – September 20XX
- Engineered a full-stack application for managing student records with CRUD operations using Java, Spring Boot, MySQL, and REST APIs, improving data access efficiency by 30% and ensuring real-time updates. - Optimized database performance through advanced query optimization, indexing, and schema design, reducing response time by 25% and handling concurrent user requests effectively. - Deployed the application on AWS EC2 with integrated security configurations and responsive UI design, enabling seamless access across multiple devices for 100+ users. - Enhanced application reliability by implementing input validation, exception handling, and end-to-end testing, resulting in zero critical errors during pilot deployment.	
Deploying Java Application with EKS, Terraform, Prometheus & Grafana	May 20XX – June 20XX
- Designed a zero-downtime deployment pipeline for an enterprise Java application using Docker, Kubernetes, Jenkins, and Terraform, ensuring continuous application availability. - Automated Kubernetes cluster provisioning with Terraform, streamlining infrastructure setup and reducing manual configuration time by 40%. - Executed auto-scaling policies and health checks for the application, maintaining consistent performance under variable workloads and improving resource utilization. - Streamlined a fully automated CI/CD pipeline integrating Jenkins and Kubernetes, accelerating deployment cycles by 50% and enabling frequent, reliable production releases.	
Automated CI/CD Pipeline	July 20XX – September 20XX
- Constructed a CI/CD pipeline for microservices deployment using Docker, Kubernetes, Jenkins, and Terraform, reducing deployment time by 40%. - Implemented security scanning with SonarQube and Trivy, identifying and mitigating vulnerabilities to improve system security. - Configured auto-scaling policies and Prometheus/Grafana monitoring to maintain application availability and track performance metrics effectively. - Optimized infrastructure-as-code workflows with Terraform, enhancing deployment efficiency and achieving 35% faster environment provisioning.	

Certifications & Achievements

- Attained AWS Certification – Forage.
- Certified in Python Programming Certification – HackerRank.
- Completed Internet of Things – NPTEL (Elite + Silver).
- Achieved Academic Excellence Award – NRI Institute of Technology.
- Deployed 3+ full-stack projects on GitHub with detailed documentation.
